

WORKHORSE 1000

Information and Specifications

WORKHORSE 1000™

The Workhorse 1000 is the heavy-duty draft horse of the Workhorse Water Trailer line. This trailer is ideal for towing a large capacity of water to construction sites for compacting roads, dust control or equipment washing. This trailer is also ideal for use on farms, ranches, agricultural job sites and is available for potable water applications. The Workhorse 500 and the Workhorse 1000 gallon model feature a low profile trailer with "pump protector" plumbing and an integrated water circulating system as a standard feature. The pump protector is a unique Workhorse feature that eliminates the need to turn off the motor to avoid the damage caused by running the pump when not spraying water. It eliminates the risk to burst pump housings caused by running over hoses. As long as water is in the tank, the pump is designed to automatically circulate water and stay cool, whether the user is actually spraying water or not.

All Workhorse Water Trailers are built with quality materials and expert workmanship. This rugged 1000 gallon trailer comes with a 2" contractor duty *MultiQuip*™ pump; 4 horse power *Honda*™ motor; and 2" rear spray bar providing coverage up to a 30' wide area. Standard features also include side spray, garden hose bib, hydrant fill pipe, self-loading (drafting) capability and a potable water outlet.

Applications for this trailer include dust control on roads, riding arenas and construction sites, fire protection, equipment washing, tree and landscape watering and maintenance and much more. The Polyethylene tank is UV resistant, patchable and is certified for "potable drinking water." Options for this model include smaller tank sizes; electric or surge brakes; ball or pintle hitch; a hose reel; a generator; or *Rainbird*™ tripods for extended reach applications. A complete hose package for this unit is also available. This water trailer can be custom-built to fit your needs including engine and pump options; the addition of a 2000 psi pressure washer; or custom paint.

General Specifications
